

Directions to use the oral syringe

Wash your hands, shake the bottle

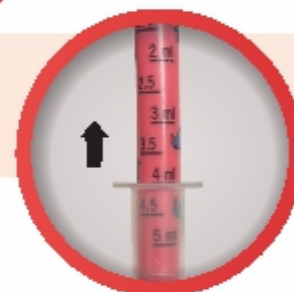

Remove the cap from the bottle and insert the syringe into the bottle

Pull the plunger until it's numbering reaches the required volume

Gently remove the oral syringe from the bottle

Put the cap back on the bottle & close the bottle

Put the tip of the oral syringe inside your child's mouth, between the gums and inside surface of their cheek

Gently push the plunger to administer small amounts of medicine into the side of your child's mouth

Allow your child to swallow the medicine before you further push the plunger

Note: Do not squirt the entire dose into your child's mouth in one go

Give your child some water to wash down the medicine

When you have given the entire dose, wash the oral syringe in clean water
